Revenue Intelligence Inbox

Evidence-First Sales Analytics, Multi-Route Classification & Audit-Grade Data Operations

EVIDENCE-FIRST INTELLIGENCE

Every route and next action is anchored directly to verbatim conversation text.

Missing transcripts explicitly distinguished from non-occurrence.

Pre-generated analyses flagged as Stale when source revisions change.

HUMAN-CONTROLLED ROUTING

Multi-destination categories: Coaching, Deal Follow-up, Support, Partnerships, Reviews.

Machine suggestions strictly separate from manager overides.

Manual human corrections deterministically preserved across source updates.

AUDIT-GRADE INGESTION

Unique identity enforced by composite primary key: (source_type, source_id).

44 logical records (30 calls, 14 meetings) with zero duplicate rows on repeat imports.

Revision precedence (Revision 2 > Revision 1) prevents downgrade regressions.

Records

Flagged for manager inspection or human review

METHODOLOGICAL GUARDRAILS

Strict Coverage Denominator: Calculated over all 44 records. Zero-turn meetings (M05, M08, M11) are recorded meetings where nobody spoke; not connector failures.

Connection Rate Integrity: Only nonnull isconnected boolean values included in denominator; 14 unknownnull records reported separately.

Strict Role Distinction: Telephone Call Representatives (rep_name) strictly separated from Meeting Organisers (organizer_email). Organisers never assumed to attend or close deals.

No Inferred Outcomes: Purchase decisions, contract values, pipeline totals marked unknown unless explicitly confirmed in conversation text.

Three Most Important Conversation Findings

Evidence-Backed Conversation Intelligence

01
Record C01

Cold Call Resistance with Latent Curiosity

"I didn't ask for this call, and I'm not interested... just briefly, what does your company actually do?"

Prospect opened with a brush-off but followed with unprompted inquiry and agreed to email overview.

Product Influence

Routed to Sales Coaching; generated objection-handling coaching card focusing on 10-second elevator hook.

02
Record C03

High-Intent ERP Developer API Qualification

"Could we do this by email? Or call on Monday... Something like 'Developer access and event notifications – follow-up'"

Technical lead verified webhook requirements and committed to Monday calendar appointment.

Product Influence

Routed to Deal Follow-up; elevated to #1 spot on Dashboard's High-Priority Recommendations widget.

03
Record C07

Reseller Consultancy Inquiry vs Direct Sale

"I wanted to ask about a possible partnership... Send whatever proposal you have... could I call on Monday...?"

Caller is an IT consultancy seeking reseller distribution, not an end-user buyer.

Product Influence

Created dedicated Partnership / Channel route category to prevent reseller leads polluting direct sales pipeline.

Deliberately Rejected Decision

Sales Rep Leaderboards: Design Principles & Governance

WHAT WAS CONSIDERED & REJECTED

Feature Considered

Competitive sales rep leaderboard ranking by connected call rate, deal conversion, win-rate scores.

Rejection Reasons

1. Selected Dataset Bias: 44 records are operational extract, not full team data; 20 unrecorded calls create misleading rankings.
2. Role Conflation: Meeting organisers cannot be assumed call attendees or deal owners.
3. Punitive Inaccuracies: Small samples incentivize metric gaming and harm trust.

ACCEPTED ALTERNATIVE & TRADE-OFF

Architecture

Neutral Activity Breakdown Cards strictly separating telephonic Call Reps from Meeting Organisers.

Metrics

Raw conversation counts and usable transcript counts per person, no comparative conversion scores or rankings.

Transparency

Visual footnote informs leadership that data is operational sample, focusing on conversation evidence, not synthetic rankings.

Import Deduplication, Revision Precedence & Replay Contract

01

Initial Ingestion (01Initial.json)

44 logical records ingested (30 calls, 14 meetings).
17 have usable text.
M07 transcript withheld (Revision 1).

02

Repeat Ingestion (dempotency)

Re-importing 01Initial.jsonon yields 0 new records,
44 unchanged rows,
zero duplicates.

03

Manual Route Correction

Manager overrides record M07 to Partnership / Channel and Human Review Needed; flag set true in IndexedDB.

04

Revision Precedence & Preservation

02 Update json arrives (Revision 2).
Records remain 44;
usable texts increase to 18.
Manual override preserved strictly.

VERIFICATION & DELIVERABLES

6 Automated Vitest Tests Passing: All replay contract assertions verified in src/ _tests _/importEngine.test.ts.

Downgrade Rejection: Re-importing revision 1 after revision 2 ignores stale records, preventing regressions.

Machine-Readable Export: Generates manifest json, manager-brief.md, dashboard metrics, and organized folders packaged as exports.zip via JSZip.
